$$\begin{aligned}
\frac{1}{2} \left(\frac{1}{2} \right)^{n-1} &= \frac{1}{2^n} \\
\frac{1}{2} \left(\frac{1}{2} \right)^{n-1} &= \frac{1}{2^n} \\
\frac{1}{2} \left(\frac{1}{2} \right)^{n-1} &= \frac{1}{2^n}
\end{aligned}$$

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The number of transformed cells was determined by the number of colonies obtained on the selective medium. The results are the mean of three independent experiments. Error bars represent standard deviation.

[illegible]

$\frac{1}{2} \leq \frac{1}{2} \leq \frac{1}{2}$

1. *Prunella vulgaris* L.
