SEEN BY THE FOLLOWING PERSONS:

1. *Phylogenetic relationships*—The phylogenetic relationships among the 12 species of *Phragmites* were determined using the maximum parsimony method. The analysis was performed using the software package PAUP 4.0 (Swofford, 1999). The analysis was based on the 12 species of *Phragmites* and their outgroups, *Phragmites communis* and *Phragmites australis*. The outgroups were chosen based on the results of a previous study (Swofford, 1999) which showed that *Phragmites communis* and *Phragmites australis* are the most closely related species in the genus *Phragmites*. The analysis was based on the 12 species of *Phragmites* and their outgroups, *Phragmites communis* and *Phragmites australis*. The analysis was based on the 12 species of *Phragmites* and their outgroups, *Phragmites communis* and *Phragmites australis*.
