After the first few days of the new year, the weather turned cold again, and the snow began to fall again. The people were worried about the lack of food and water, and many of them started to leave the city to find somewhere else to live.

Thus we find that the α -amylase activity is higher in the bran fraction than in the flour fraction, and that the bran fraction contains more protein than the flour fraction.

It is not clear whether the above-mentioned effect is due to the presence of the *l*-isomer or to the presence of the *d*-isomer.

For the first time in history, the world has the opportunity to move away from fossil fuels and toward a sustainable energy future. This is a momentous occasion, and we must seize it.
