

Notes:

1. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

Notes:

1. Introduction:

The purpose of this analysis is to determine the concentration of the sample of the material.

1. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

2. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

3. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

4. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

5. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

6. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

7. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

8. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.

9. The results of the analysis of the sample must be compared with the results of the analysis of the sample of the same material.
