

PROBLEM 1

Statement

Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be a function.

Prove that:

If f is continuous at x_0 and $f(x_0) = 0$, then f is continuous at x_0 and $f(x_0) = 0$.

Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be a function.

If f is continuous at x_0 and $f(x_0) = 0$, then f is continuous at x_0 and $f(x_0) = 0$.

Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be a function.

Prove that:

If f is continuous at x_0 and $f(x_0) = 0$, then f is continuous at x_0 and $f(x_0) = 0$.

Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be a function.

If f is continuous at x_0 and $f(x_0) = 0$, then f is continuous at x_0 and $f(x_0) = 0$.

Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be a function.

Prove that:

If f is continuous at x_0 and $f(x_0) = 0$, then f is continuous at x_0 and $f(x_0) = 0$.

Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be a function.
