[illegible]

$\frac{d}{dt} \left(\frac{\partial L}{\partial \dot{x}} \right) = \frac{\partial L}{\partial x}$

[illegible][illegible]

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem. Once the problem has been defined, the next step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the underlying causes. Once the causes have been identified, the next step is to develop a plan to address the problem. This involves identifying the actions that need to be taken to address the problem and determining the resources that will be needed to implement the plan. Finally, the last step in the process is to implement the plan and monitor the results. This involves putting the plan into action and tracking the progress of the plan to ensure that the problem is being addressed effectively.

The graph shows a curve starting at the origin (0,0) and increasing towards the point (1,1). The X-axis is labeled with values 0, 0.2, 0.4, 0.6, 0.8, and 1. The Y-axis is labeled with values 0, 0.2, 0.4, 0.6, 0.8, and 1. The curve is concave down, indicating that the rate of increase decreases as the X-axis value increases.
