

Figure 1 consists of four maps of the United States, labeled (a) through (d), showing the distribution of the four major ethnic groups in 1990. Each map uses a color scale to represent population density. Map (a) shows the distribution of Whites, with a legend ranging from 0 to 100,000,000. Map (b) shows the distribution of Blacks, with a legend ranging from 0 to 10,000,000. Map (c) shows the distribution of Hispanics, with a legend ranging from 0 to 1,000,000. Map (d) shows the distribution of Asians, with a legend ranging from 0 to 1,000,000. The maps show that Whites are the most numerous group, followed by Blacks, Hispanics, and Asians. The distribution of Whites is relatively even across the country, while the distribution of Blacks is more concentrated in the South and in urban areas. Hispanics are concentrated in the Southwest and in urban areas. Asians are concentrated in the Northeast and in urban areas.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each participant. The number of correct responses increased with the number of trials, and the increase was more pronounced for the high-ability group than for the low-ability group.

1. *Introduction*

1. *Pharmaceutical industry* – The pharmaceutical industry is a major player in the healthcare sector, responsible for the development, production, and distribution of drugs. It is a highly regulated industry with significant research and development costs. The industry is often criticized for high drug prices and for prioritizing profit over patient care.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).
