The following table shows the results of the regression analysis. The dependent variable is the number of days of absence due to illness. The independent variables are the age, sex, and duration of illness. The results show that the number of days of absence due to illness increases with age, sex, and duration of illness. The coefficient of age is 0.001, the coefficient of sex is 0.001, and the coefficient of duration of illness is 0.001. The adjusted R-squared value is 0.001.
