CELEBRADA EL PRIMER DIA DEL MES DE NOVIEMBRE DEL 2006.

1. **ARTIFICIAL SCORING** - The scoring of a subject's responses is done by a computer program. The program is designed to score the responses in a way that is consistent with the scoring key. The program also calculates the subject's total score and the subject's score on each item.

For the first three alternatives, the χ^2 statistic is 5.14, 4.00 and 3.00, respectively, with 1 degree of freedom. For the fourth alternative, the χ^2 statistic is 2.00 with 2 degrees of freedom. The null hypothesis is rejected at the 5% level of significance for all four alternatives. As a result, the χ^2 test indicates that the observed frequencies are not consistent with the expected frequencies.
