For sample sizes $n \geq 10$, the test statistic T_n is asymptotically normal with mean 0 and variance $1/n$. Consequently, $\sqrt{n}T_n$ converges in distribution to a standard normal random variable as $n \rightarrow \infty$. We consider a regression model with k covariates, $k \geq 1$, and assume that the error term ϵ_i is independent of the covariates X_i and that the error term ϵ_i is normally distributed with mean 0 and variance σ^2 .
