1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to determine what consumers want and what problems they are trying to solve. Once a need is identified, the next step is to develop a concept that addresses this need. This is often done through brainstorming sessions with a team of designers and engineers. The concept is then refined through prototyping and testing, ensuring that it meets the requirements of the target market. Finally, the product is launched into the market, and its performance is monitored to ensure it continues to meet consumer needs and expectations.

1. **Identificação:** Nome do paciente, idade, sexo, data de nascimento, endereço completo, cidade, estado, CEP, telefone, e-mail.
 2. **Relatório Médico:** Descrição detalhada da doença, sintomas, exames realizados, diagnóstico, tratamento prescrito, evolução da doença, prognóstico.
 3. **Prescrição:** Medicamentos prescritos, dosagem, frequência de uso, duração do tratamento.
 4. **Exames de Laboratório:** Resultados de exames de sangue, urina, fezes, etc.
 5. **Exames de Imagem:** Resultados de exames de radiografia, ultrassom, tomografia, ressonância magnética, etc.
 6. **Exames de Diagnóstico:** Resultados de exames de diagnóstico diferencial, como testes de função renal, testes de função hepática, etc.
 7. **Exames de Monitorização:** Resultados de exames de monitorização da resposta ao tratamento, como testes de função renal, testes de função hepática, etc.
 8. **Exames de Acompanhamento:** Resultados de exames de acompanhamento da evolução da doença, como testes de função renal, testes de função hepática, etc.
 9. **Exames de Controle:** Resultados de exames de controle da eficácia do tratamento, como testes de função renal, testes de função hepática, etc.
 10. **Exames de Avaliação:** Resultados de exames de avaliação da qualidade de vida do paciente, como testes de função renal, testes de função hepática, etc.
