[illegible]

The results are divided by country & by Departmental Regions, subject to the following conditions:

- (a) The number of regions per country must be at least three.
- (b) The number of regions per Departmental Region must be at least two.

Les données de terrain et l'analyse ont été réalisées par l'équipe de l'Institut de Recherche en Santé Publique de l'Université de Montréal et l'équipe de l'Institut de Recherche en Santé Publique de l'Université de Québec.

These data were no different compared with the other two groups. Therefore, the authors concluded that the use of the *in vitro* model was not sufficient to detect the effect of the different concentrations of the active ingredients on the release of the active ingredients.
