4. QUESTIONS CONCERNANT VOTRE PROPOS DE LA FICHE POUR CHACUN DES

Table 1. *Continued*

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h at 28 °C. The cell concentration of the strains was adjusted to 10<sup>8</sup> cells/ml. The cell suspension was mixed with the plant tissue and the transformation efficiency was determined. The results were expressed as the mean ± SD of three independent experiments. The asterisk indicates a significant difference (*P* < 0.05) between the strains.

                       |                             |

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (CG) and the experimental group (EG). The CG was subjected to a standard training protocol, while the EG was subjected to a modified training protocol. The EG was divided into two subgroups: the EG1 subgroup and the EG2 subgroup. The EG1 subgroup was subjected to a modified training protocol, while the EG2 subgroup was subjected to a standard training protocol. The subjects were then subjected to a test protocol, and the results were compared between the CG and the EG.
