1. **Introduction**

The purpose of this document is to provide a detailed description of the system architecture and its components. This document is intended for use by the development team and the project manager.

2. **System Architecture**

The system architecture is designed to be modular and scalable. It consists of the following components:

- Frontend:** The user interface is built using a modern web framework.
- Backend:** The server-side logic is implemented using a robust programming language.
- Database:** The data is stored in a relational database.
- API:** The system uses a RESTful API for communication between the frontend and the backend.

3. **Deployment**

The system is deployed on a cloud platform, ensuring high availability and scalability. The deployment process is automated using a CI/CD pipeline.

4. **Conclusion**

This document provides a comprehensive overview of the system architecture. It is a living document and will be updated as the system evolves.
