

1. Objectives of the study

2. Methodology

3. Results

The first objective of the study was to determine the prevalence of the disease in the study population. The second objective was to determine the risk factors for the disease.

The third objective of the study was to determine the impact of the disease on the quality of life of the study population. The fourth objective was to determine the effectiveness of the intervention.

The fifth objective of the study was to determine the cost-effectiveness of the intervention. The sixth objective was to determine the sustainability of the intervention.

The seventh objective of the study was to determine the acceptability of the intervention. The eighth objective was to determine the feasibility of the intervention.

The ninth objective of the study was to determine the generalisability of the intervention. The tenth objective was to determine the replicability of the intervention.

The eleventh objective of the study was to determine the transferability of the intervention. The twelfth objective was to determine the scalability of the intervention.
