Figure 1. The effect of the concentration of the *Agrobacterium* strain on the transformation efficiency of *Agrobacterium* strain 101. The concentration of the *Agrobacterium* strain 101 was varied from 10 to 1000 cells per μ l of the transformation mixture. The transformation efficiency was determined as the number of transformants per μ l of the transformation mixture. The transformation efficiency was determined as the number of transformants per μ l of the transformation mixture. The transformation efficiency was determined as the number of transformants per μ l of the transformation mixture.
