1. **Formal review**
 The formal review is a structured, systematic, and controlled examination of the software product, which is performed by a team of reviewers, who are not the developers of the product. The purpose of the formal review is to identify errors and defects in the software product, before it is released to the users. The formal review is a critical part of the software development process, as it helps to reduce the cost of errors and improve the quality of the software product. The formal review is typically performed at the end of the development phase, before the software product is released to the users. The formal review is a team effort, where each reviewer is responsible for a specific part of the software product. The reviewers are typically developers, testers, and project managers. The formal review is a structured process, where the reviewers follow a set of guidelines and procedures. The formal review is a controlled process, where the reviewers are given access to the software product and its documentation. The formal review is a systematic process, where the reviewers examine the software product in a systematic and organized manner. The formal review is a team effort, where each reviewer is responsible for a specific part of the software product. The reviewers are typically developers, testers, and project managers. The formal review is a structured process, where the reviewers follow a set of guidelines and procedures. The formal review is a controlled process, where the reviewers are given access to the software product and its documentation. The formal review is a systematic process, where the reviewers examine the software product in a systematic and organized manner.
