

**1. Introduction**  
The purpose of this study is to investigate the effects of a new educational program on student performance.

**2. Methodology**  
The study was conducted using a quasi-experimental design with two groups: an experimental group and a control group.

**3. Results**  
The results show that the experimental group performed significantly better than the control group on the post-test.

**4. Discussion**  
The findings suggest that the new educational program has a positive impact on student learning outcomes. This is supported by the statistical analysis which shows a significant difference between the two groups.

**5. Conclusion**  
Based on the results, it is concluded that the implementation of the new educational program is effective in improving student performance.
