

1. **Introduction**
The purpose of this study is to investigate the effects of the proposed system on the performance of the system. The study is divided into two main parts: a theoretical analysis and an experimental evaluation.

2. **Theoretical Analysis**
The theoretical analysis is based on the principles of the proposed system. It shows that the system is capable of achieving the desired performance under certain conditions.

3. **Experimental Evaluation**
The experimental evaluation is based on the results of the theoretical analysis. It shows that the system is capable of achieving the desired performance under the same conditions.

4. **Conclusion**
The study shows that the proposed system is capable of achieving the desired performance under the same conditions. The results of the theoretical analysis and the experimental evaluation are in good agreement.
