

QUESTION 10

Which of the following is the best way to ensure that the data is accurate and reliable?

The data is collected from a single source and is not subject to any change or manipulation.

The data is collected from multiple sources and is subject to change or manipulation.

The data is collected from multiple sources and is not subject to change or manipulation.

ANSWER

The best way to ensure that the data is accurate and reliable is to collect it from multiple sources and to ensure that it is not subject to change or manipulation. This is because data from a single source is more likely to be biased or incomplete, and data that is subject to change or manipulation is more likely to be inaccurate.

QUESTION 11

Which of the following is the best way to ensure that the data is accurate and reliable?

The data is collected from a single source and is not subject to any change or manipulation.

The data is collected from multiple sources and is subject to change or manipulation.

The data is collected from multiple sources and is not subject to change or manipulation.

ANSWER

The best way to ensure that the data is accurate and reliable is to collect it from multiple sources and to ensure that it is not subject to change or manipulation.

QUESTION 12

The best way to ensure that the data is accurate and reliable is to collect it from multiple sources and to ensure that it is not subject to change or manipulation.
