Abstract: The purpose of this study was to determine the effect of a 12-week training program on the strength and endurance of the upper extremities of 10 male subjects. The subjects were divided into two groups: a control group and a training group. The training group performed a 12-week training program consisting of three sessions per week. The control group did not perform any training. The results showed that the training group had significantly higher strength and endurance than the control group at the end of the 12-week training program. The results also showed that the training group had significantly higher strength and endurance than the control group at the end of the 12-week training program. The results also showed that the training group had significantly higher strength and endurance than the control group at the end of the 12-week training program.
