卷之三

and the other two were added to the water. The water was then heated to 100°C and the reaction was allowed to proceed for 1 h. After cooling, the reaction mixture was extracted with dichloromethane (3 x 10 mL). The organic layer was dried over anhydrous sodium sulfate and the solvent was removed under reduced pressure. The residue was purified by column chromatography (silica gel, hexanes/ethyl acetate, 100:0 to 50:50) to give 100 mg of product.

such as the *prostaglandin* (prostaglandin *E*) and the *cystein* (cysteine) *metabolites* found in the urine from the patients. The value of the *metabolite* test was also demonstrated in our *patients*.
