1. The proposed addition of a new section to the existing code of ethics is being proposed by the Ethics Committee of the American Psychological Association. The committee is composed of representatives from the American Psychological Association, the American Psychological Society, the American Psychological Association of Counselors, and the American Psychological Association of Teachers. The committee is currently reviewing the proposed addition and will make a final decision by the end of the year. The proposed addition is being made to the existing code of ethics to address the issue of the use of force in the treatment of children. The proposed addition states that the use of force in the treatment of children is prohibited unless it is necessary to prevent harm to the child or to the community. The proposed addition also states that the use of force in the treatment of children must be justified by the therapist and must be documented in the child's record. The proposed addition is being made to the existing code of ethics to ensure that the use of force in the treatment of children is properly regulated and monitored.

1. **Statement:** The growth rate of the economy is directly related to the growth rate of the public sector. **Answer:** No. The growth rate of the economy is not directly related to the growth rate of the public sector. The growth rate of the economy is determined by a number of factors, including technology, capital, and labor. The growth rate of the public sector is determined by government spending and taxation. While government spending can have a positive effect on the growth rate of the economy, it is not a necessary condition for growth. In fact, excessive government spending can lead to inflation and a decrease in the growth rate of the economy.

10. **Properties of Functions**

A function f is a set of ordered pairs (x, y) such that for every x in the domain of f , there is exactly one y in the range of f such that $(x, y) \in f$. The set of all x in the domain of f is called the domain of f , and the set of all y in the range of f is called the range of f . The graph of a function f is the set of all ordered pairs (x, y) such that $(x, y) \in f$.
