1. The first step is to identify the problem or question that needs to be answered.

2. The second step is to gather relevant information and data to address the problem.

3. The third step is to analyze the information and data to identify patterns and trends.

4. The fourth step is to develop a hypothesis or a proposed solution based on the analysis.

5. The fifth step is to test the hypothesis or solution through experiments or observations.

6. The sixth step is to evaluate the results of the tests and draw conclusions.
