En el presente estudio, los resultados obtenidos indican que el consumo de alcohol en adolescentes de 15 años de edad, en la zona de estudio, es menor al 10%, lo que indica que el consumo de alcohol en esta población es bajo. Sin embargo, se debe tener en cuenta que el consumo de alcohol en adolescentes puede ser un indicador de riesgo para el desarrollo de problemas de salud mental y física, por lo que se debe continuar investigando sobre este tema.

Abstract. The authors present a new method for the analysis of the dynamic behavior of a system. The method is based on the use of the Laplace transform and the Fourier transform. The method is applied to the analysis of the dynamic behavior of a system. The results of the analysis are presented in the form of a block diagram. The method is simple and easy to use. It can be applied to the analysis of the dynamic behavior of a system. The results of the analysis are presented in the form of a block diagram. The method is simple and easy to use. It can be applied to the analysis of the dynamic behavior of a system. The results of the analysis are presented in the form of a block diagram.

1. *Staphylococcus aureus* (S. aureus) is a Gram-positive, spherical bacterium that is commonly found on the skin and in the nose of humans and animals. It is a facultative anaerobe, meaning it can grow with or without oxygen. S. aureus is a major cause of skin infections, such as abscesses, boils, and impetigo, as well as more serious infections like pneumonia and sepsis. It is also a common cause of food poisoning.
