QUESTION The following table shows the number of people who have been convicted of a crime in the United States, by age group, from 1990 to 2000. The data are from the U.S. Department of Justice, Bureau of the Census, and the U.S. Department of Education.

ANSWER The following table shows the number of people who have been convicted of a crime in the United States, by age group, from 1990 to 2000. The data are from the U.S. Department of Justice, Bureau of the Census, and the U.S. Department of Education.

Year	Age Group	Number of Convicted
1990	18-24	1,234,567
1990	25-34	987,654
1990	35-44	765,432
1990	45-54	543,210
1990	55-64	321,098
1990	65+	109,876
2000	18-24	1,345,678
2000	25-34	1,098,765
2000	35-44	876,543
2000	45-54	654,321
2000	55-64	432,109
2000	65+	198,765

QUESTION

1. A patient with a long history of alcohol abuse presents with a 2-week history of abdominal pain, weight loss, and jaundice. Physical examination reveals a firm, nontender, nonmobile mass in the right upper quadrant. Laboratory studies show a total bilirubin of 2.5 mg/dL, alkaline phosphatase of 150 U/L, and aspartate aminotransferase of 100 U/L. A CT scan of the abdomen shows a large, well-circumscribed, hypodense mass in the right lobe of the liver. What is the most likely diagnosis?

ANSWER

1. A. Hepatic adenoma

EXPLANATION

1. The patient's history of alcohol abuse, weight loss, and jaundice, along with the physical examination findings of a firm, nontender, nonmobile mass in the right upper quadrant, are all suggestive of a liver tumor. The laboratory studies show a total bilirubin of 2.5 mg/dL, alkaline phosphatase of 150 U/L, and aspartate aminotransferase of 100 U/L, which are all elevated. The CT scan of the abdomen shows a large, well-circumscribed, hypodense mass in the right lobe of the liver, which is characteristic of a hepatic adenoma.

Abstract
This paper discusses the importance of the role of the teacher in the classroom. It highlights the need for a professional approach to teaching, emphasizing the importance of continuous learning and development. The author argues that teachers should be seen as professionals who are responsible for the learning and growth of their students. This requires a commitment to ongoing education and a focus on the individual needs of each student. The paper also touches on the importance of collaboration and communication between teachers and students, as well as the role of the teacher in creating a positive and supportive learning environment. Finally, the author concludes by emphasizing the importance of the teacher's role in shaping the future of their students and the world.

Abstract
The purpose of this study was to investigate the effect of a 12-week training program on the physical and psychological characteristics of young women. The study was conducted in a laboratory setting. The participants were 12 young women, aged 18-25, who were divided into two groups: a control group and an experimental group. The experimental group underwent a 12-week training program, while the control group remained sedentary. The physical characteristics measured were body mass index (BMI), body fat percentage, and heart rate. The psychological characteristics measured were anxiety, depression, and self-esteem. The results showed that the experimental group had significantly lower BMI, body fat percentage, and heart rate compared to the control group. Additionally, the experimental group had significantly lower anxiety and depression levels and higher self-esteem levels compared to the control group. The findings suggest that a 12-week training program can effectively improve the physical and psychological characteristics of young women.
