1. **Identify the problem.**
 2. **Identify the cause.**
 3. **Identify the effect.**
 4. **Identify the solution.**
 5. **Identify the action plan.**
 6. **Identify the evaluation.**
 7. **Identify the conclusion.**
 8. **Identify the recommendation.**
 9. **Identify the summary.**
 10. **Identify the final statement.**

Figure 1
A large number of studies have shown that the use of a computer-based system for data collection and analysis can significantly reduce the risk of bias in clinical research.

Abstract

an integrated approach. As a first step, we will develop a methodology to assess the impact of the various factors on the overall system performance. This will be followed by a detailed analysis of the system architecture and the identification of the key components. Finally, we will develop a set of guidelines to optimize the system performance.
