

DISCUSSION

The results of the present study indicate that the hippocampus is involved in the processing of visual information. The hippocampus is also involved in the processing of auditory information (Krebs et al., 1999; Lutje Spelberg et al., 1999; Saksida et al., 2000; 2002). However, the hippocampus is not involved in the processing of olfactory information (Lutje Spelberg et al., 1999; Saksida et al., 2000; 2002).
