

Portoviejo, 20 de julio de 2018

Señora:  
**ESTHER BERNARDITA CEDEÑO INTRIAGO**  
Ciudad.

Estimada señora:

Cúpleme informar a usted, que mediante la Escritura de Constitución de la compañía **PITHA FRUIT PITHAEXPORT CIA. LTDA.**, la designó a Usted, **GERENTE GENERAL** de la compañía por un periodo de 5 años, contados a partir de la fecha de inscripción del presente nombramiento en el Registro de la Propiedad y Mercantil del cantón Rocafuerte, de conformidad a lo establecido en los estatutos de la compañía.

De conformidad a lo dispuesto en el Artículo Décimo Quinto de los estatutos de la compañía, el Gerente General ejerce la Representación legal, judicial y extrajudicial de la compañía.

La compañía **PITHA FRUIT PITHAEXPORT CIA. LTDA.**, fue constituida mediante Escritura Pública otorgada ante el Abg. **IVAN PATRICIO MOLINA MENDOZA**, Notario Público Octavo Encargado del cantón Portoviejo, según acción de personal N° 5684-DP13-2018-K, el 20 de julio de 2018.

Cumpla usted con los demás requisitos que dan validez a este instrumento.

Atentamente

  
**LEONARDO ENRIQUE VILLACRESES VITERI**  
**PRESIDENTE DE LA COMPAÑÍA**

**RAZÓN:** Acepto el nombramiento que antecede y prometo desempeñar las funciones a mí encomendadas, con apego a las leyes del país y al estatuto social de la Compañía.

**NACIONALIDAD: Ecuatoriana**  
**DOMICILIO: Portoviejo**

INSTRUMENTAL ANALYSIS

The first part of the analysis involves the determination of the concentration of the analyte in the sample. This is done by comparing the intensity of the signal from the sample to that of a known standard. The standard is a solution of the analyte of known concentration, and its signal intensity is measured under the same conditions as the sample. The ratio of the sample signal to the standard signal is then used to determine the concentration of the analyte in the sample.

The second part of the analysis involves the determination of the identity of the analyte. This is done by comparing the spectrum of the sample to that of a known standard. The spectrum is a plot of the intensity of the signal versus the wavelength or frequency of the radiation. The standard is a solution of the analyte of known identity, and its spectrum is measured under the same conditions as the sample. The spectrum of the sample is then compared to that of the standard to determine the identity of the analyte.

The third part of the analysis involves the determination of the purity of the analyte. This is done by comparing the spectrum of the sample to that of a known standard. The spectrum is a plot of the intensity of the signal versus the wavelength or frequency of the radiation. The standard is a solution of the analyte of known identity, and its spectrum is measured under the same conditions as the sample. The spectrum of the sample is then compared to that of the standard to determine the purity of the analyte.

The fourth part of the analysis involves the determination of the structure of the analyte. This is done by comparing the spectrum of the sample to that of a known standard. The spectrum is a plot of the intensity of the signal versus the wavelength or frequency of the radiation. The standard is a solution of the analyte of known identity, and its spectrum is measured under the same conditions as the sample. The spectrum of the sample is then compared to that of the standard to determine the structure of the analyte.
