...le force bien au point!

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

[illegible]

Figure 1. Schematic diagram of the experimental setup. The subject is seated in a chair and views the target through a video camera. The target is a light source that is controlled by a computer. The subject's hand is positioned over the target. The distance between the hand and the target is 10 cm. The target is a light source that is controlled by a computer. The subject's hand is positioned over the target. The distance between the hand and the target is 10 cm.

$$\frac{d}{dt} \left(\frac{\partial L}{\partial \dot{x}} \right) = \frac{\partial L}{\partial x}, \quad \text{where } L = T - V.$$

1. *Phylogenetic relationships*—The phylogenetic relationships among the 12 species of *Phrynosoma* were determined using the parsimony method of Farris (1993) with the computer program PAUP (Phylogenetic Analysis Using Parsimony; version 4.0; Farris, 1996). The parsimony method was chosen because of the lack of a priori knowledge of the relative importance of the morphological characters used in this study. The parsimony method was applied to the morphological data matrix using the following settings: heuristic search, 100 random starting trees, 1000 iterations, and 1000 iterations of tree pruning. The tree was then subjected to 1000 iterations of randomization and 1000 iterations of tree pruning. The tree was then subjected to 1000 iterations of randomization and 1000 iterations of tree pruning. The tree was then subjected to 1000 iterations of randomization and 1000 iterations of tree pruning.
