

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated with the plant explants for 24 h. The explants were then cultured on the selective medium. The number of explants transformed was counted. The results are the mean $\pm$ SD of three independent experiments. The statistical significance was determined by the Student's *t*-test. * indicates $p < 0.05$.
