Notes to Readers

Table 10. Summary of the Results
1. The results of the study show that the use of the proposed model is effective in reducing the number of errors in the process of data entry.
2. The results of the study show that the use of the proposed model is effective in reducing the time required for data entry.
3. The results of the study show that the use of the proposed model is effective in reducing the cost of data entry.
4. The results of the study show that the use of the proposed model is effective in reducing the risk of data entry.
5. The results of the study show that the use of the proposed model is effective in reducing the number of errors in the process of data entry.
6. The results of the study show that the use of the proposed model is effective in reducing the time required for data entry.
7. The results of the study show that the use of the proposed model is effective in reducing the cost of data entry.
8. The results of the study show that the use of the proposed model is effective in reducing the risk of data entry.
9. The results of the study show that the use of the proposed model is effective in reducing the number of errors in the process of data entry.
10. The results of the study show that the use of the proposed model is effective in reducing the time required for data entry.
11. The results of the study show that the use of the proposed model is effective in reducing the cost of data entry.
12. The results of the study show that the use of the proposed model is effective in reducing the risk of data entry.
13. The results of the study show that the use of the proposed model is effective in reducing the number of errors in the process of data entry.
14. The results of the study show that the use of the proposed model is effective in reducing the time required for data entry.
15. The results of the study show that the use of the proposed model is effective in reducing the cost of data entry.
16. The results of the study show that the use of the proposed model is effective in reducing the risk of data entry.
17. The results of the study show that the use of the proposed model is effective in reducing the number of errors in the process of data entry.
18. The results of the study show that the use of the proposed model is effective in reducing the time required for data entry.
19. The results of the study show that the use of the proposed model is effective in reducing the cost of data entry.
20. The results of the study show that the use of the proposed model is effective in reducing the risk of data entry.
