These early PCTs have been used to demonstrate the feasibility of the PCT as a diagnostic test for chronic hepatitis C in patients with 20-year disease duration, given their relatively low sensitivity, positive predictive value, and potential for false-positive results. The PCT may also be useful in monitoring treatment response.

#### **Reindeer in the Polar Regions**

It is difficult to determine the nature of the increased survival of patients with metastatic disease, but it is likely that some benefit may have come from the better diagnostic and therapeutic advances in other diseases. A total of 10000 patients (patients and family members) were interviewed during the study.

These findings were replicated in a second study in a general adult hospital population and extended to both older men and women, indicating no gender difference.
