Keywords: child sexual abuse; disclosure; self-blame

1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is responsible for the investigation. The investigator must identify the problem and the scope of the investigation. The investigator must also identify the objectives of the investigation. The investigator must then develop a plan of action to address the problem. The plan of action should include the methods to be used, the resources to be used, and the timeline for the investigation. The investigator should then implement the plan of action and monitor the progress of the investigation. The investigator should also communicate the results of the investigation to the appropriate parties. The investigator should then evaluate the results of the investigation and make any necessary adjustments to the plan of action. The investigator should then report the results of the investigation to the appropriate parties. The investigator should then close the investigation.

11.5.5.5. *Staphylococcus aureus* (Gram positive)
